---

## PROFESSIONAL SUMMARY

---

I help Web2 and Web3 products turn complex ideas into content that ranks, explains, and converts. My background spans frontend, backend, APIs, and blockchain (JavaScript, TypeScript, Python, Solidity, smart contracts, DeFi), which lets me understand a product at the code level before writing about it for any audience — developers, technical teams, or first-time users. Work is grounded in primary-source verification: claims get checked before they're published, not asserted on the strength of fluent prose. That range now spans developer documentation, live product copy for consumer brands, and research-driven company breakdowns.

## WHAT I DO

---

- **Technical Writing:** Documentation, API docs, developer guides, whitepapers
- **Content Writing:** Research-driven articles, explainers, thought leadership
- **SEO Writing:** Content that ranks on Google and Bing — site audits, keyword research, and on-page fixes using Search Console, Analytics, Ahrefs, SEMrush, and Ubersuggest
- **Product Copywriting:** Landing pages, product pages, UX copy that drives action

## TECHNICAL SKILLS

---

- **Languages:** JavaScript, TypeScript, Python, Solidity
- **Stack:** Next.js, Node.js, Express, REST APIs, Prisma ORM, PostgreSQL, Supabase
- **Blockchain:** Smart contracts, Ethereum, DeFi, ethers.js, Hardhat
- **Dev Tools:** Git, GitHub, Vercel, Markdown, docs-as-code workflows
- **SEO & Analytics:** Google Search Console, Google Analytics, Ahrefs, SEMrush, Ubersuggest
- **Collaboration:** Google Docs, Slack, Notion

## SELECTED PROJECTS

---

**Roomly — Student Accommodation Platform** | *Next.js · TypeScript · Express · Prisma · Supabase · Paystack/Monnify*

- Founded and built a live multi-role SaaS platform for Nigerian university accommodation, owning product, design, engineering, and deployment — including an escrow-backed payment workflow.

**Smart Contract Development** | *Solidity · ethers.js · Hardhat*

- Built and tested a flash-loan arbitrage smart contract on a mainnet fork before deploying to Ethereum mainnet — hands-on experience with AMM mechanics and on-chain contract interactions.

## SELECTED WRITING

---

### Product Copy

- [Roomly — Student Housing Platform](#) — end-to-end platform copy for verified accommodation search, secure booking, and caretaker tools.
- [Noel's Essentials — Product Copy](#) — product and storefront copy for a Nigerian natural-products brand.

### Technical Writing

- [Roomly Developer Guide: Build on the Student Housing API](#) — practical guide to building against Roomly's proposed API, first request through full dashboard.
- [Build a RAG Pipeline with Node.js and TypeScript](#) — step-by-step tutorial with real error handling.
- [Dangote Refinery Stock: Why ₦10,000 Is Unrealistic](#) — research-driven breakdown fact-checked against the IPO prospectus and primary financial sources.

### Persuasive Writing

- [Roomly Founder Story — Why I Built It](#) — first-person founder narrative on building Roomly after being scammed and overcharged searching for student housing.

## EDUCATION

---

**Bachelor of Technology (B.Tech), Computer Science** | *Federal University of Technology, Minna*

- 5-Year Program, Year 3 (In Progress)

## CONTINUED LEARNING

---

- Google Technical Writing One & Two
